Continuation Sheet (PTO-303) 009/236,339

Application No.

Continuation of 2. NOTE: the amendments to claims 1, 11, 19 and 20 raise new problem of 35 USC 112, second paragraph. In particular, the feature concerning the "optical axes of said first holding member and said second holding member during the coupling operation" (claim 1, lines 11-12) is indefinite because the holding member does not have optical axis. The optical member held by the holding member has optical axis, not the holding member itself. Similar feature in each claim 11, 19 and 20 make those claims indefinite.

Continuation of 3. Applicant's reply has overcome the following rejection(s): 1) the objection to the drawings; and 2) the rejections of claims under 35 USC 112, second paragraph set forth in the previous Office action (Paper No. 24, pages 3-5); and 3) the double patenting objections to claims 21 and 22 due to the cancelation of those claims.

Continuation of 5. does NOT place the application in condition for allowance because: the deformable ring 32 located between the second base plate (16) and the couping members (34) provided by Sezerman acts as a deformable element that restricts the deformation of the first base plate (18). Applicant's arguments have been fully considered but they are not persuasive.
